PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 90104-B	SESSION NUMBER: 01
DATE OF SESSION: 901022	DATE OF REPORT: 901023
START TIME: 1506	END TIME: 1601
METHODOLOGY: CRV	SOURCE IDENTIFIER: 049

SG1A

2. (S/NF) VIEWER TASKING: Utilizing encrypted coordinates, describe the target.

3. (S/NF) COMMENTS: Physical inclemencies of a hurting jaw from dentist and being tired. Viewer seemed to be very "on" throughout session, including twenty minutes of non-stop continuous descriptions, possibly a bi-lo. A summary of information and sketches are attached to this report.

4. (S/NF) EVALUATION:

5. (S/NF) SEARCH EVALUATION:

Summary of Information

The target consists of an activity which involves staging and planning. The surrounding area is mixed with wide, soft land and rugged mountains. There is also a number of cuts or crevasses reminiscent of dry washes or wadis. Some places are jagged and/or stepped. There is a lot of smoke or steam and at times, clouds of this. The smells and sensations are reminiscent of a fertilizer, petro or otherwise chemical facility. There is a sense of movement and loading activity. One location has tall, linear lines and it is narrow. Another location has concentric half circles radiating out from a central point. Something is being pushed away or pushed out from this point; almost projected out. There is a lot of jumbledness associated with the above. There are energy emanations and a sense of sensing going on. The activity has intense pressure associated with it. Pressure in the sense that someone or something is being pressured to quickly learn something and to become proficient in the activity. There is a technological aspect/feeling about all of this. Again, it revolves around sensing and detection in part. There is an overwhelming concern by a mid-level individual of making something work...quickly. It seems that the individuals present do not know how to operate the equipment they have, but they want

S E C R E T NOFORN

S E C R E T NOFORN

to know badly. An individual is walking up a slope of very soft sand. He is sinking into the sand and it is difficult to maintain his pace. He has come up over the rise to face a large level area that is roughly circular. There are people running around and there is a rushing sound. A mechanical movement is occurring. There is lifting, setting and attaching one set of objects to others. There is a round, cylindrical object with fin-like pieces attached (see diagram 1). There are pointed objects which are predominately silver and green. There is an object looming above me which is rounded with a transparent feature. There are lots of curved surfaces and black. A portion of it is pointed. The level area is reminiscent of a fenced in compound, yet the protecting apparatus (ie the fence) is not very visible. Within the left portion of the area are one or two small sheds or tents. Behind these is an open-sided structure with stacked objects under and around it. On the extreme right side is a cluster of cylindrically shaped objects. In the central area are at least three very level, hard packed round spots. These spots feel associated with the loading and attaching activities mentioned earlier. It feels as if I am standing under a large pointed object which has contained power or energy. There is someone checking attachments or extended parts of the larger objects. This person is groping with his fingers into holes or cracks, checking something. This location

gives a sense of a staging area, or rather, that something is being staged. This activity is occurring within the vicinity of the towns of BAIJI, TIKRIT and AL FATHA (all northwest of BAGDAD).

*Alfatha area
is northwest of
Bagdad.*
